Please vote against the proposed controls of satellite radio such that they will no longer be able to broadcast local traffic and weather for major cities. This is a service that is very valuable to the traveling public. Don't punish these companies, XM and Sirius, for being innovative. Don't encourage the existing broadcast stations to continue to be stagnant with the same old daily grind. Instead of lobbying against new ideas, the broadcast radio stations should be working to improve their services. Let competition do what it does best -- Encourage newer and improved services.
